

PRESENTATION

A Next-Generation Wearable Platform for Human Performance

Human Performance, Engineered Through Real-Time Intelligence

Company Overview

Vantare VantageSuit is a performance technology platform within **MW3 Performance Group LLC**, redefining how movement is learned, corrected, and reinforced through intelligent wearable systems.

The platform delivers **real-time biomechanical guidance**, enabling athletes, coaches, and clinicians to improve execution during activity rather than relying on delayed feedback.

The business **operates** with a lean structure, prioritizing deployment within existing training environments while building **partnerships** across sports performance, rehabilitation, and tactical sectors.

Mission

To enable individuals to move with greater awareness, precision, and consistency through real-time physical guidance.

Vision

To become the foundational platform for human performance development across training, recovery, and applied movement environments.

Powering Vantare's Innovation

- **Elite Athletic Background:** Former Major League Baseball player with firsthand experience in high-performance environments
- **Academic Expertise:** Advanced academic training in biomechanics, performance science, and human movement development
- **Problem Insight:** Deep understanding of the gap between coaching instruction and physical execution
- **Innovation Leadership:** Creator of a system that translates coaching intent into real-time physical guidance
- **Industry Perspective:** Experience across sports, training systems, and performance methodologies
- **Vision Alignment:** Focused on building scalable solutions for improving movement across multiple sectors

Problem

The Translation Gap: Coaching does not equal physical execution

There is currently no system that translates coaching instruction into real-time physical correction.

The Input

Athletes rely on subjective verbal cues or delayed video analysis

The Friction

Athletes hear the feedback, but struggle to translate it into physical execution

The Result

Improper mechanics and inefficient, unscalable movement patterns

The Real-World Cost

3.5 Million sports injuries occur annually in the U.S., linked to improper mechanics¹

Introducing Vantare VantageSuit™:

Guided Physical Learning

Old Model: Cognitive & Delayed

Athletes 'hear' subjective instructions post-execution.

New Model: Physical & Immediate

Athletes 'feel' precise physical corrections during execution.

A wearable exosuit delivering real-time biomechanical feedback during active movement.

Initial Deployment (Phase 1):

Focused on data capture, session tracking, & performance summary.

Full System Vision:

Real-time physical correction powered by integrated sensing with coach-guided or AI-driven adaptive feedback.

A Comprehensive Human Performance System

An integrated system combining wearable hardware, software platforms, and performance tools.

Wearable Exosuit System

A lightweight, modular suit embedded with sensors for movement detection.

Coaching Application

A companion app that enables coaches or AI to define movement patterns and manage training sessions.

Real-Time Feedback Engine

A system that processes movement data and generates feedback signals.

Performance Insights Platform

A digital interface providing movement tracking, trend analysis, and long-term development visibility

Team and Institutional Solutions

Deployment models for academies, teams, clinics, and organizations with multi-user access and scalability.

Licensing and Subscription Access

Ongoing access to software features, coaching tools, and system updates through recurring subscriptions

Future Data and Performance Services

Expansion into analytics-driven insights, remote training capabilities, and advanced performance optimization services

Real-Time Biomechanical Intelligence System

The Vantare VantageSuit™ platform is powered by a layered architecture combining sensing, processing, and adaptive feedback systems.

- **Integrated Motion System:** Multi-point sensors capture movement and positional changes continuously
- **Adaptive Guidance Engine:** Processes motion data and generates response signals
- **Modular Exosuit Architecture:** Flexible design adapts across body types and training contexts
- **Dynamic Response Framework:** Adjusts system response based on movement patterns and activity conditions
- **Performance Insights Platform:** Aggregates data for ongoing analysis & development

How It Works

Intelligent and Continuous Movement Feedback

The system delivers a seamless process that connects sensing, processing, and response into a continuous movement cycle.

Unlocking Underserved Training Demand

The U.S. sports and performance training landscape is entering a phase of strong adoption of wearable & data-driven tools, yet current solutions remain fragmented and do not address real-time movement correction during training.

29.2%

U.S. share of the global smart sports wearables market, reflecting strong U.S. adoption of sports wearable technology.¹

16.7M

Baseball participants in the U.S. (2023),² with high school sports participation reaching 8.06M athletes.³

\$4B

\$4B in annual NCAA athletic scholarships supporting 500,000+ student-athletes across 1,000+ programs.⁴

36%–44%

U.S. adults using wearable technology, with wearables ranked the #1 fitness trend in 2024.⁵

4.4M

Sports and recreational injury-related emergency visits annually in the U.S.,⁶ with ~3.5M total sports injuries per year⁷

11%

Projected growth in physical therapist employment (2024–2034), indicating expanding rehabilitation demand.⁸

Organizations spend heavily on training, analytics, and wearables, but the lack of real-time movement feedback creates a clear gap in performance technology.

Addressable Market Size

Sports Technology & Wearable Performance Market

The business operates in the U.S. sports technology and wearable performance market, offering a system that improves movement, training consistency, and real-time coaching for athletes and training organizations.

Market Sizing Approach:

Estimates are based on **U.S. sports technology market data**, **wearable adoption trends**, and industry benchmarks.

TAM reflects the total sports technology ecosystem, **SAM** narrows to wearable-based performance systems, and **SOM** assumes initial penetration of approximately 1% of SAM through early adoption across training organizations.

From Monitoring to Real-Time Performance Correction

Existing Market — Monitoring & Analytics Systems

What they do

Track athlete movement and performance

Provide data and post-session analysis

Support coach-driven decision making

Limitations

No real-time physical correction

No closed-loop learning system

No direct feedback to the athlete during movement

What Vantare does:

- ✓ Detect movement in real time
- ✓ Deliver immediate physical feedback (haptic guidance)
- ✓ Reinforce correct movement patterns
- ✓ Enable scalable coaching across multiple athletes

Existing systems measure performance. Vantare improves it in real time.

What Exists vs What's Missing

Performance Monitoring

What they do:

- ✓ Track movement and workload in real time
- ✓ Provide GPS, speed, load, and positional data
- ✓ Deliver dashboards for coaches

What they don't do:

- ✗ No physical feedback to the athlete
- ✗ No movement correction during execution
- ✗ No closed-loop learning system

Motion Analysis

What they do:

- ✓ Analyze biomechanics and motion patterns
- ✓ Provide feedback via app or post-session review
- ✓ Support technique improvement through data

What they don't do:

- ✗ No real-time physical correction
- ✗ No continuous feedback during movement
- ✗ No integrated training system

Mechanical Assistance / Training Devices

Exoskeleton / Resistance Systems

What they do:

- ✓ Provide resistance or guided movement
- ✓ Use sensors or programmed motion in some cases
- ✓ Support muscle memory development

What they don't do:

- ✗ Not flexible or sport-adaptive
- ✗ Often impose movement (not athlete-driven)
- ✗ No integrated sensing + feedback + learning loop

Closed-Loop Performance System

What Vantare does:

- ✓ Detect movement in real time
- ✓ Deliver immediate physical feedback through haptic guidance informed by coaches or AI.
- ✓ Reinforce recommended movement patterns
- ✓ Enable scalable coaching across athletes
- ✓ Integrate sensing, feedback, and learning into one system

Others measure or analyze performance. Vantare actively improves it in real time.

Strategic Entry and Expansion Approach

Our go-to-market strategy prioritizes controlled deployment, validation, and expansion through performance-focused organizations.

Initial Focus

Target baseball training facilities for early adoption and validation

Institutional Partnerships

Collaborate with academies, clinics, and performance organizations

Program Expansion

Extend into collegiate and professional performance environments

Long-Term Scaling

Enter youth, consumer, and tactical performance markets

Sports Expansion

Extend beyond baseball into broader athletic performance environments and training programs

Healthcare Integration

Expand into rehabilitation, physical therapy, and movement recovery applications

Tactical Applications

Enter military and high-performance operational training environments requiring precision and discipline

Technology and Data Evolution

Integrate with immersive systems while advancing data-driven performance insights and analytics

Early Progress and Market Alignment

Vantare VantageSuit™ has established early validation through product development, technical alignment, and initial engagement across performance environments.

These developments demonstrate early execution, technical readiness, and a clear pathway toward real-world validation.

Structured Deployment for Real-World Validation

The pilot plan is designed to validate system effectiveness, usability, and adoption within real training environments through structured deployment.

- **Pilot Targets:** Engagement with 3–5 organizations, each including 20–30 participating athletes
- **Deployment Structure:** 60-day implementation period with 15–20 VantageSuit units distributed across sites
- **Training Integration:** Systems embedded within existing performance routines to ensure realistic testing conditions
- **Success Metrics:** Measurement of movement consistency improvement, coach adoption, and athlete usability satisfaction
- **Conversion Objective:** Target conversion of 50–70% of pilot participants into paying customers

Hybrid and Recurring Revenue Structure

Vantare VantageSuit™ operates a hybrid monetization structure that combines hardware distribution with recurring digital access, enabling consistent engagement & long-term value generation across performance environments.

Team Licensing

Multi-user access models designed for academies, training facilities, and institutions

Hardware Sales

VantageSuit units sold to individuals, teams, and organizations as the primary entry point

Institutional Contracts

Agreements with organizations deploying the system across structured environments

Software Subscriptions

Monthly access to coaching tools, real-time feedback, and performance insights

Data & Analytics Expansion

Expansion into performance insights and advanced data services

Phased Execution Strategy

Vantare VantageSuit™ roadmap defines a phased execution plan covering product deployment, validation, and expansion across performance environments.

Phase 1 (0–9 months)

- Produce **15–20 units**, launch **3 pilot programs**, and complete **application version 2** deployment

Phase 3 (18+ months)

- Scale production to **50+ units**, support early-stage **revenue generation**, & prepare for seed funding

Phase 2 (9–18 months)

- Expand to **5–10 organizations**, collect **150+ athlete sessions**, and refine product and pricing

Building a High-Margin, Scalable Model

The financial outlook reflects a hybrid structure combining upfront product sales with recurring subscription-based access.

\$7.41M

Revenue in 5 Years

\$1.84M

Net Profit in 5 Years

73.6%

Average Annual ROI

Financial Highlights

**Financial projections are based on unit deployment assumptions, pricing models, pilot conversion rates, and phased market expansion.*

The Ask

Funding to Drive Deployment and Validation

Vantare VantageSuit™ is seeking investment to transition from prototype readiness to real-world deployment, validation, and early-stage commercialization across targeted performance environments.

\$500,000

This funding will support production, product refinement, pilot execution, and market entry to establish early adoption and validate performance outcomes.

Human Performance. Engineered.

Redefining movement through the integration of elite athletic insight and biomechanical intelligence.

Powering the future of real-time athlete training, adaptation, and performance.
